

AMS600 – Human factors and Safety Management System in Aeronautical Maintenance

From the Advanced Master AMS: E&M
(Aeronautical Maintenance and Support:
Engineering & Management)

Highlights

- Safety culture in maintenance
- Risk management tools
- Industrial expertise

This module provides participants with a thorough understanding of the concepts of human factors and Safety Management System in relation to aircraft maintenance, and how to mitigate errors and limitations using risk management techniques. This module focuses on safety culture and safety management.

Prerequisites

- Good aeronautical engineering and engineering management background;
- Knowledge of aviation safety regulatory bodies and regulation.

*not compulsory

Key elements

Dates: 3 - 6 March 2020
(exam: 19 March 2020*)

Duration: 20 hours

For whom:
**recent graduates, jobseekers
and experienced employees**

Location:
ISAE-SUPAERO, Toulouse

Course fees: 2 000 €

Language: English

Learning objectives

After completing this course, participants will be able to:

- Understand the scope of human factors related to human performance and limitations involved in management of safety;
- Describe a Safety Management System within an MRO environment;
- Understand and apply risk management techniques, risks models and safety investigation means;
- Understand the significance of safety culture and develop its promotion.

Practical information and registration

AMS600 – Human factors and Safety Management System in Aeronautical Maintenance

From the Advanced Master AMS: E&M
(Aeronautical Maintenance and Support:
Engineering & Management)

Course content

Human factors (HF):

- SHELL model
- Individual and collective human performance and limitations
- Human errors
- Workplace
- Communication
- Role of management
- Organization performance and continuous improvement

Safety Management System (SMS):

- Objectives
- Regulatory framework
- Main concepts
- Methodology
- Organization and responsibilities
- MRO experience

Risk management techniques:

- Strategies for aircraft maintenance environment
- Models (bowtie, Reason, PEAR)
- Techniques (investigation, Maintenance Error Decision Air, safety studies, MLOSA)

Safety culture promotion

Case study:

- Evaluation of an aircraft maintenance situation
