Objectives

In an increasingly competitive international context, the research on innovative materials combined with optimization of calculation methods for structures, and their statistical, dynamic and thermal certification are major assets for industrial architects in the aircraft and spacecraft sectors. The «Aeronautical & Space Structures » prepares engineers with a future career in design, research and development, certification, testing and qualification, in-depth, multi-disciplinary know-how in mechanical engineering applied to structures. This Master program is the european reference in the field.

The program aims to grow expertise in numerical calculation for the most advanced structures, knowledge in materials as well as an understanding of their interferences with the environment (in particular loads and fluid-structure interactions).

The dynamics of flexible structures, modeling and active and passive structural control of complex elements are the core focus of this master program.

The goal of the AES Advanced Master program is to train specialists in the field of design, optimization and certification of light structures who have mastered methods of modeling and analysis of aircraft structures and space vehicles in the industrial context.

Learning approach

First semester:
380 hours of courses delivered from September to March on the premises of ISAE by permanent ISAE-SUPAERO faculty and visiting lecturers from industry providing the latest industrial expertise including: lecture courses, design offices, lab work, numerical simulations, CAD, lab sessions, industrial visits.

Second semester:
Students have to conduct a professional thesis or make an internship in an industry or in a laboratory, in France or abroad, supervised by a tutor from the host organization and from ISAE-SUPAERO. The thesis is concluded by the preparation of a report and an oral dissertation in front of a jury.

Organization

Head of program
- Prof. Yves GOURINAT
  yves.gourinat@isae-supaoer.fr

Course duration
One year full time : 6 months of courses and 6 months of professional thesis or internship.

Course start date
September

Location
ISAE-SUPAERO

Teaching language
English

Syllabus

Part 1: Aerospace structures: methods & tools for engineering & dynamics - 62 h
- Flight dynamics: an introduction
- Aerodynamics: an introduction
- MATLAB standards
- Structural dynamical control: an introduction
- Structural shells modeling and recycling
- Advanced numerical models

Part 2: Aerospace systems architecture - 82 h
- Aerodynamics loads
- Aircraft structural loads
- Architecture & structure of launch vehicles
- Helicopters: architecture & design
- Satellites: architecture & structures

Part 3: Aerospace structures: dynamics & physics - 138 h
- Finite elements: application to aeronautical structures
- Flexible aircraft: dynamics & aeroelasticity
- Dynamical active control of structures
- Advanced computation of aircraft structures
- Advanced structural dynamics

Part 4: Aerospace programs & technologies - 75 h
- Mechanics of aerospace materials
- Computer Assisted Design & Drawing
- Commercial aircraft: strategies for design & innovative programs

Times project - 25 h
Team Innovative Management for Evolved Strategies

Career opportunities

This program, unique in Europe, has trained over 170 engineers. Today, graduates of the program are working as research or design engineers in international companies in the aeronautics, space and mechanical engineering sectors.

The advanced scientific level of the MS AES program also paves the way for career opportunities in research in solid mechanics and structures.

Companies recruiting our students
Aerazur, Airbus Group, Altran, Astek, ASSYSTEM, ATKINS, AXS Analyse de Structures, Air France, CLAIRIS TECHNOLOGIES, Dassault Aviation, DLR (Germany), ESA, Latecoere, SAFRAN Engineering Services, Segula, Sodern, Sogeti, Thales, Thales Alenia Space, Renault, PSA, ...
Testimonies

Why did you choose ISAE-SUPAERO and apply for this MS? What were your objectives?

HUGO DE BASTOS
Graduated in 2019
Engineer in Aerodynamic studies at ArianeGroup

I choose ISAE-SUPAERO because it’s one of the most important school in aeronautic and aerospace engineering. The proximity and the relation of the school with Aerospace industry also were an advantage I took in consideration. I apply to the MS “Aeronautical and Space Structure”, because it cover many aspect of mechanics in aeronautics and space domain. My objectives were to get a different view of engineering than my previous school, I also wanted to improve my knowledge in mechanics to have a complete education.

MENELAOS FILIPPITZIS
Cohort 2019-2020
AIRBUS Trainee / Flight Physics department / Loads and aeroelastics

Having finished my studies in Mechanical engineering in Greece I wanted to enhance my knowledge and passion for aerospace and specialize in the domain of aero structures. After performing an exhaustive survey of schools and master degrees available, all the roads were pointing towards ISAE-SUPAERO. The accuracy of the syllabus, coupled with the professional and industry oriented character of this Master gave me the confidence that it was what I was looking for. Last but not least, you get the chance to live in one of Europe’s most beautiful and cool city, Toulouse!

According to your experience, what are the strong assets of the Master?

Firstly, this Advanced Master meet my expectations, because I learned a lot in mechanics and the way to approach engineering was different.

Then, the strongest assets of this Master are the personnel and the teachers. For many of them, the classes were a dialog with the teachers (for example during Yves Gourinat’s lessons), which was very interesting and helpful for the young engineer we were. The quality of the courses also was a very good point and many of us discovered unexpected affinities for some of the disciplines in Aeronautics and Space engineering.

The specialization and expertise offered by the AES Master, the well organized study plan, the quality and performance of the teachers and experts, all together make it one of its kind.

The opportunity given to the students to listen, learn and discuss with experts from the industry and the companies they are willing to work for is a huge advantage. Not to mention that acquiring a ISAE degree, automatically certifies and assures all recruiters in the aerospace sector that your profile must be shortlisted and taken into account.

What are your career plans?

My first plan was to work in Space industry, in mechanics studies, which is a success. I the future I would like to see many different technical aspect, to try to work in a foreign country or/ and in French Guiana.

After my internship in AIRBUS SAS I am willing to explore the space sector and implement all the skills acquired from the AES Masters. The aerospace sector is a significantly up coming domain and Toulouse has a lot of interesting opportunities for passionate engineers.
Admission procedures

ADVANCED MASTERS

Academic requirements
A master’s degree, or an equivalent degree in science or engineering (or in management for advanced masters in management), or bachelor degree completed by 3 years of professional experience.
Tuition fees: see our website.

LANGUAGE REQUIREMENTS
FOR ALL MASTERS

TOEFL (IBT) or TOEIC or IELTS or CAE/FCE

85 points (Inst. code: 9820)
785 points
6.5 points
170 points

NOTA BENE: Volume of teaching hours and contents of the programs are provided for information only and are subject to change.

LANGUAGE REQUIREMENTS
FOR MASTERS IN FRENCH

Language qualification requested
Score B2 - Common - European Framework of Reference for Languages

SELECTION AND ADMISSION

Selection and admission are made by an admission committee:
Possible interviews can be organized if necessary.

Deadlines for application:
Applications open in October 2020 for intake in September 2021. Several admission committees scheduled from January to July, see schedule on our website.

Application website:

Funding
Information on tuitions fees and funding can be found on our website
