This module provides knowledge of the physics of the space environment encountered by the spacecraft. Participants will learn about the constraints imposed by the environment. It will be dealt with training techniques for predicting effects on materials, electronics components and embedded systems and the various solutions to mitigate these degradations and their impact on the functioning of the system involved.

**Prerequisites**
- Master level

*not compulsory

**Learning objectives**

After completing this course, participants will be able to:
- Identify constraints specifically imposed by space environment (micro-gravity, radiations...);
- Model with simulation tools the space environment.

**Highlights**
- Physics and components interaction
- Use of professional simulation tools
- Experts from space research center

**Key elements**

Dates: 13 – 21 October 2020  
(exam: 4 November 2020*)
Duration: 12 hours
For whom: recent graduates, jobseekers and experienced employees
Location: ISAE-SUPAERO, Toulouse
Course fees: 1 600 €
Language: English

Practical information and registration
Natalia Perthuis - 05 61 33 80 47 – info.exed@isae-supraero.fr
Course content

- Introduction to the space environment
- Description of the physics of space environment
- Radiations - materials interactions
- Charging of materials and systems in space environment
- Effects of the space environment on electronics components
