Objectives
Aeronautical, Space and Defense business is, by nature, complex, innovative with high technical added value. Placed at the heart of political, economic, environmental and technological issues, in France, in Europe and worldwide, it requires a prospective vision from decision makers. It is based on specific industrial processes, characterized by long, costly and risky cycles (R & D, production, maintenance & support).

In this context, project management in aerospace environment requires mastering a wide scope of knowledge, know-how and expertise adapted to the specific needs and issues of this challenging worldwide business.

To answer to these concerns, ISAE-SUPAERO, Ecole de l’Air and ENAC gather their expertises to develop the Aerospace Project Management (APM) advanced master.

The professionally-oriented APM advanced master provides students with an overview on military or civil international Aerospace industry and gives up-to-date skills, cutting-edge knowledge, and necessary competences for successfully leading Project or Program teams in global aerospace and defense industry.

Learning approach
First semester: with an emphasis on operations, the program is designed to those beginning their career in management of projects or to professionals aiming at enhancing their competences for a fast career evolution. The program of the APM is taught, by experts or lecturers with extensive aerospace project experience, with a combination of formal presentations, in-class exercises and study cases. The objectives of this practical approach are to provide students with current techniques and tools in project management taking into account industrials, economical or legal specificities of the Aerospace business.

The teaching staff is composed of professors, lecturers and consultants from ISAE-SUPAERO and Ecole de l’Air (CReA). Several consultants, experts into project management are invited to deliver their knowledge from their own experience.

On top of that, many experts from industries, most of the time heads of aerospace programs, will illustrate parts of the courses.

Second semester: students have to conduct a professional thesis or make an internship in an industry or in a laboratory, in France or abroad, supervised by a tutor from the host organization and from Ecole de l’Air or from ISAE-SUPAERO. The thesis is concluded by the preparation of a report and an oral dissertation in front of a jury.

Organization
Head of Program ISAE-SUPAERO
- Prof Philippe GIRARD
  philippe.girard@isae-supaero.fr

Head of Program Ecole de l’Air
- Prof Pierre BARBAROUX
  pierre.barbaroux@ecole-air.fr

Head of program ENAC
- Prof Nicolas PETEILH
  nicolas.peteilh@enac.fr

Course duration
One year in full time: 6 months of courses and 6 months of professional thesis or internship

Course start date
End of September

Location
- ISAE-SUPAERO (Toulouse)
- ENAC (Toulouse)
- Ecole de l’Air (5 weeks in Salon de Provence - October November)

Teaching language
English

Syllabus
The comprehensive training program is organized into four teaching parts:

Part 1: Overall overview of aerospace industry - 50 h
The first part provides the students with an in-depth overview of worldwide aeronautics and space industries enabling them to have an overall understanding of technologies, products, innovation and strategy stakes in the global civil and defence market.

Part 2: Methodology - 190 h
This part leads to a good understanding of Project management tools (WBS, planning, needs specification, etc).
Models and Methods of Project management for Aerospace context with specificities for high stakes and long cycle programs.

Part 3: Economic and financial aspects - 150 h
This part leads to a good understanding of economical stakes for nations or industries and the role of politics.
How to evaluate the cost of a long term program, the investment return hope, but also how to manage costs during development or manufacturing phase.

Part 4: Knowledge management in multicultural team project - 60 h
This part underlines the necessity to integrate and federate competences around a common objective: how to motivate people for a long term project.
How to integrate intercultural management within international Program to avoid conflicts and change resistance.
In each of these parts the risks evaluation and control will be systematically underscored as well as Quality concepts and indicators dedicated to Aerospace context.
Career opportunities

APM advanced master program leads students to integrate or to become Head of Aerospace program team. To conceive and pilot complex projects with permanent care of costs and risks control in Aerospace companies or in defense in Companies recruiting our students: AIRBUS, Air France, AVIC, Liebherr Aerospace, Reliance Defence, Scalian, Safran Electronics & Defense, Elron Consulting, Jet

PMI Certification

The APM program offers you to get PMI Certifications: CAPM or PMP. In an increasingly changing world, professional certification ensures that project managers meet the demands of space projects through the globe. By offering an additional month of training, you will be specially prepared to CAPM or PMP exams. Volunteers will have opportunity to complete the APM diploma with a PMI certification well known and appreciated through the world and which open door to success. Teachers for preparation are certified themselves and experts of PMBOK reference.

Testimonies

Why did you choose ISAE-SUPAERO and apply for this MS ?
What were your objectives ?

PAVITHRA MANGHAIPATHY
Cohort 2019

At my masters program at Georgia Tech we had a presentation from ISAE-SUPAERO and even before that while I was researching Global Aerospace Programs I had come across ISAE several times. Having the chance to talk to my professors and also interact with the panel at the presentation solidified my decision to apply because I was looking for a global program. As for the APM Advanced Masters, I sat and thought about where I wanted to be in the Aerospace Industry. I had an American Degree which was very research focused but I wanted to gain a better understanding of the Global industry situation. In order to do so, the MS APM course at ISAE offered a package that was very broad and I felt as though I could benefit from the learning experience.

SEBASTIAN WIINBLAD-RASMUSSEN
Graduated in 2017
Project Manager - Airbus Helicopter

Having graduated with an Aeronautical Engineering degree from the University of Glasgow, I wanted to add a professionally orientated Management degree to my profile. As the leading Aerospace Engineering school in France, and located at the heart of European Aerospace industry in Toulouse, ISAE-SUPAERO was an obvious choice. The fact that this degree is coupled with training at ENAC and Ecole de l'air made this course even more attractive.

My objective was firstly to acquire insight into how large, multinational Aerospace projects are run and to get industry experience in this field. Secondly, it was my objective to use this course and the experience it would provide as a stepping stone into a technical Project Management position within the Aerospace Industry.

According to your experience, what are the strong assets of the Master ?

I think the strongest asset of the Masters is that it covers a lot of topics. While that may seem a bit daunting, it really offers the chance to see the industry for what it is and appreciate its vast diversity. The Aerospace Industry is very complex and is very unique in its own right, combine that with the turnover and rate of development, I think this master puts it all into perspective and helps you really plan out a path.

Firstly, the APM course offers access to a wide range of industry and Project Management consultant experts, providing insight into both the Aeronautical and Space sectors. These professionals also provide an understanding of what it takes to become a Project Manager and what key skills industry looks for in graduates and experienced project professionals alike. Furthermore, the variety of modules provides a broad understanding of how the industry is structured and the interactions between key actors.

Secondly, the variety of professional backgrounds and nationalities within the course itself serves as an important learning experience for the real-world challenges that multi-national Aerospace programs face today.
What are your career plans?

Currently, I want to invest all my energy into understanding how I can contribute to design and innovation now that I have both a technical and non-technical basis and reach a balanced approach. Even in the long term, I want to focus on streamlining innovation to be more open, inclusive and efficient.

I am currently working as Project Manager within the Chief Engineering Department for the H145 program at Airbus Helicopters in Germany. In this role, I plan to take on increasingly complex and large-scale development projects or potentially to move to another Airbus division as the next challenge. It is my long term goal to continue to develop my technical Project Management skills and work towards a Head of Program or Chief Engineer position within the European Aerospace industry.

Admission procedures

Advanced Masters

Academic requirements
A master's degree, or an equivalent degree in science or engineering (or in management for advanced masters in management), or bachelor degree completed by 3 years of professional experience

Tuition fees: see our website

Language requirements for Masters in English

TOEFL (IBT) or TOEIC or IELTS or CAE/FCE

85 points or 785 points or 6.5 points or 170 points

Language requirements for Masters in French

Score B2-Common - European Framework of Reference for Languages
