Objectives
The TAS Astro - Space Systems Engineering Advanced Master program is a one-year professional course of study. The TAS Astro Advanced Master allows students to develop a high level of multidisciplinary skills in space science, space systems engineering and space project management. It enables the students to access work opportunities with numerous career opening in aerospace projects, be it with space agencies, research agencies, or industrial companies in an international environment.

The program is designed for students who wish to start immediately after the completion of their graduate degree and for employees who have enrolled through their companies continuing education programs.

The TAS Astro curriculum includes a broad spectrum of subjects with the following objectives:
- to develop specific skills applied to space sector: Space systems engineering and management of space projects
- to acquire high interdisciplinary knowledge related to technical, legal and economic aspects of international space programs

Learning approach
First semester: academic session of 560h, provided by ISAE-SUPAERO's permanent professors and various experts from research centers (ONERA), space agencies (CNES, ESA), or European aerospace companies (Thales Alenia Space, Airbus Defense & Space, ArianeGroup).

This first semester includes:
- lectures and exercises,
- engineering and design study seminars,
- laboratory sessions,
- written reports and oral presentations,
- practical sessions, team work and industrial visits.

Second semester : students have to conduct a professional thesis or perform an internship in an industry or in a laboratory, in France or abroad, supervised by a tutor from the host organization and from ISAE-SUPAERO. The thesis is concluded by the preparation of a report and an oral dissertation in front of a jury.

Organization
Head of program
- Prof. Stéphanie LIZY-DESTREZ
  stephanie.lizy-destrez@isae-supaero.fr

Course duration
One year full time : 6 months of courses and 6 months of professional thesis or internship.

Course start date
September

Location
ISAE-SUPAERO

Teaching language
English

Space Exploration Development Systems
The SEEDS (Space Exploration Development Systems) international placement is an optional extra project. The student will work in multidisciplinary teams on space exploration research projects, designed in collaboration with advisors from the space industry.

ISAE-SUPAERO’s partners in SEEDS are the Politecnico di Torino in Italy and the University of Leicester in UK. All three institutions have strong links with the space industry, a heritage of space research and exploration, and high-level expertise in the delivery of teaching. The student will spend two months at each institution and will be required to cover basic travel and subsistence costs. The course is taught in English at all three sites.

The international SEEDS program is supported and endorsed by the Italian (ASI), French (CNES) and UK Space Agencies, as well as Thales Alenia Space, ALTEC and numerous other companies and institutions, ESA (European Space Agency).
Why did you choose ISAE-SUPAERO and apply for this master? What were your objectives?

PAULINE DELANDE
Graduated in 2019
OPERATIONS ENGINEER - CNES

I would like to emphasize the quality of the theoretical and practical courses provided by numerous passionate industrial experts, researchers and ISAE-SUPAERO teachers.

The Master is well organized, turned towards an industrial application: it allows students to build a first network for future internships and jobs. The topics covered are complementary and provide strong knowledge.

This knowledge is then applied through very interesting projects. To cite two examples: we worked per groups on the design of a Human permanent outpost on Phobos for up to 12 astronauts and on the development of a space transportation solution from Low earth Orbit to Geostationary Orbit for commercial satellites (SpaceTug).

At last, I also took the SEEDS option where I worked for 6 months with 38 other European students on a manned mission on the Moon to produce propellant by exploiting Lunar In-Situ Resources as a System Engineer and Project Manager. In addition to keep learning, this project allowed us to travel a lot in Europ and forge amazing memories.

What are your career plans?

Now that my internship at CNES (French Space Agency) is over, I would love to work as a System Engineer on space projects in relation with Advanced Concepts, Space Exploration or Human Spaceflight missions. My dream is to work for a Space Agency and/or launch my own company one day.
Admission procedures

Advanced Masters

Academic requirements
A master's degree, or an equivalent degree in science or engineering (or in management for advanced masters in management), or bachelor degree completed by 3 years of professional experience
Tuition fees: see our website

Selection and admission

Selection and admission are made by an admission committee:
Possible interviews can be organized if necessary

Deadlines for application:
Several admission committees scheduled from January to July, see schedule on our website

Language requirements

Language requirements for Masters in French

Language qualification requested
Score B2-Common - European Framework of Reference for Languages

Language requirements for Masters in English

TOEFL (IBT) or TOEIC or IELTS or CAE/FCE

85 points or 785 points or 6.5 points or 170 points

NOTA BENE: Volume of teaching hours and contents of the programs are provided for information only and are subject to change
