

Questionnaire

Environmental Impact

Could your project ultimately have an impact on environmental issues: climate and greenhouse gas emissions, biodiversity or resource conservation (energy, water, materials)?

- Yes, this is an explicit objective of the entire project
- Yes, the project as a whole will advance knowledge that will improve the impact, but it is implicit
- Yes partially, it is an explicit objective of part of the project
- Yes partially, it is an implicit objective of part of the project
- No, not at all

Does this project use tools or metrics to quantify the environmental impacts studied?

- No
- Yes, but not very specifically (e.g. improving the efficiency of a machine, reducing energy consumption, etc.)
- Yes, in a very specific way (e.g. life cycle analysis, radiative forcing, etc.)

Environmental Issues

What environmental issues does your project address? (none or more than one answer possible)

- Climate
- Biodiversity
- Resources (energy, water, materials)
- Other: ...

How much of your project is devoted to these environmental issues?

- Not very significant (less than 25% of the time)
- Significant (between 25% and 50% of the time)
- Very significant, the heart of the project (more than 50% of the time)

Strategy & Solutions

Does your project include a component to study solutions to reduce these environmental impacts (e.g. mitigation, adaptation)?

- No
- Yes, incrementally without disruptive innovation
- Yes, through disruptive innovations

Does your project incorporate a strategy for minimising the environmental impact associated with its implementation (e.g. policy in terms of business travel, digital and experimental means)?

- No
- Yes

In addition to environmental issues, does your project address a societal issue (e.g. equity, health, education, etc.)?

- No
- Yes
